

Use-Case Flow Specification

Use Case: Place Order

Primary Actor: Shopper

Supporting Actor: Payment Gateway

Preconditions

1. The shopper has selected one or more products from the marketplace.
2. The selected products are available for purchase.
3. The shopper has added the required products to the shopping cart.
4. The payment service is available.

Postconditions

1. The order is successfully created and recorded in the system.
2. The order details are made available to the respective Artisan Vendor(s).
3. The shopper receives confirmation that the order has been placed.
4. The payment is processed for the order.

Main Success Scenario

1. The Shopper browses and searches for the required artisan products.
2. The Shopper selects the desired products and adds them to the cart.
3. The Shopper reviews the cart and chooses to place the order.
4. The system displays the order details and total amount.
5. The Shopper proceeds to make the payment.
6. The system sends the payment request to the Payment Gateway.
7. The Payment Gateway successfully processes the payment.
8. The system creates the order and records the order details.
9. The system makes the order available to the respective Artisan Vendor(s).
10. The system displays an order confirmation to the Shopper.

Alternate Flow

A1. Payment Failure

1. At Step 7, if the Payment Gateway rejects or fails to process the payment, the system does not create the order.
2. The system informs the Shopper that the payment was unsuccessful.
3. The Shopper can retry the payment or cancel the order.

4. If the payment is successfully completed on retry, the system continues from Step 8 of the Main Success Scenario.
